

Intrado Spatial Insight

Priceless to the Field, Free to the PSAP

As public safety professionals, you want to enable your field teams with the best possible insight into the emergency you are sending them into. The more detail, the better. Intrado Spatial Insight provides that greater detail to telecommunicators in the PSAP, so they can pass it along to responders in the field.

Data sources include:

Smartphones
and IoT Devices

Automotive
Telematics

Building floor plans and
emergency contact information

With smartphones, information including blood type, medications, allergies/reactions, medical notes and emergency contacts may be available. We also deliver extended data from vehicle telematics, including make, model, color, airbag status and fuel type of the vehicle. In some cases, even greater detail is available. We also supply subscriber billing address, building layouts and z-axis information.

In the end, while the exact data provided to first responders will vary across provider types (handset makers, vehicle telematics providers) and the particulars of how each manufacturer has implemented extended data, what remains in common across all instances is that the boots on the ground will have better, clearer insights into the emergency they are responding to before they arrive.

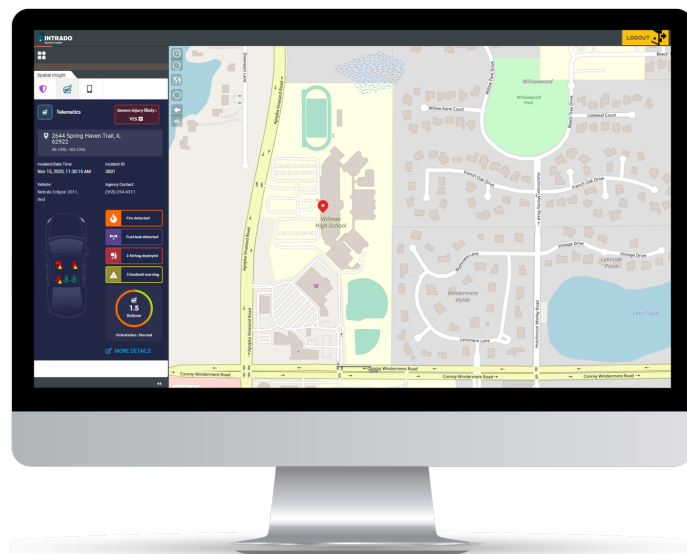

Intrado Spatial Insight Benefits:

Free – this public safety service is offered at no charge to the PSAP. No hidden fees.

Fast, Easy Deployment – Spatial Insight is fast and easy to deploy with flexible integration options.

System Agnostic – seamless integration with not only Intrado call handling solutions like Power 911 but also all other major systems from other solution providers.

Easy, Intuitive Workflow – no additional complexity for the PSAP telecommunicator.

Always there
in an emergency

intrado.com

Forewarned is forearmed – set your responders up to win every time.

Better triage and preparation for every call from having a better understanding of the situation on the ground.

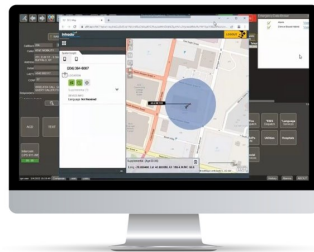

Key Data Sources:

- **Apple EED:** fast, accurate location estimates in addition to Medical ID, additional information and emergency contacts transmitted from the Apple device
- **Android ELS:** quick, accurate location detail plus critical medical and emergency contact information sourced from the device
- **Bosch Service Solutions:** a trusted mobility service provider for leading automotive OEMs. During an emergency, lifesaving vehicle crash data is collected and made available to public safety to aid in the response. These critical services are extended to more than 13 million connected vehicles in the US
- **GeoComm:** Detailed indoor maps for over 5,000 buildings spanning schools, airports, courts and hospitals across 28 states
- **Subscriber Billing Address** provides the billing address associated to the wireless phone number and the caller's proximity from that address
- **Toyota Connected:** Vehicle location, vehicle description, and supplementary incident data received from automotive telematics during emergencies from more than 10 million vehicles on the road

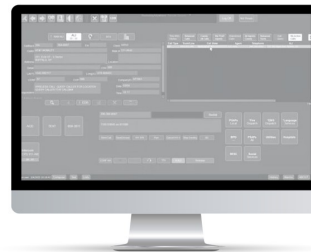

Empower Your Response Team Today

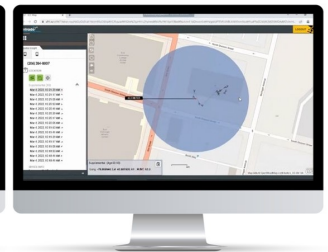

Stand-alone

Intrado Integration

3rd Party Integration
